Details of New initiative in Ksharsutra procedure

1. Guide wires or plastic stillette are used for probing the fistula tract along with malleable copper probes.
2. Before applying Ksharsutra , Fistula tract is thoroughly curated with curette and H₂O₂ Betadine wash is given.
3. Xylocaine 2% jelly is smeared on Ksharsutra so that it becomes pliable and smooth enough to thread through the tract. It also decreases the burning sensation after application as it is topical anaesthetic.
4. Sometimes prone position is used for application of Ksharsutra as it avoids prolonged lithotomy position.
