**SOP for Jalaukavacharana**

- General examination of patient is done (complete history taking, Ayurvediya ashtavidha ,dashavidha pariksha)
- Patient is selected considering indications and contra indications of Raktamokshana- Jalaukavacharana
- Routine blood examinations- Haemogram, ESR, BT, CT, BSL etc.is done as a pre-operative assessment of patient.
- Patient is asked to have normal diet before Jalaukavacharana in order to avoid fainting.
- Complete procedure of Jalaukavacharana is explained to patient and written informed consent will be produced prior to procedure.
- Comfortable position is given for Jalaukavacharana and for better performance of Jalaukavacharana and for the management of any complications, necessary things will be collected prior to procedure
- Jalauka is taken out of pot and then about 10 minutes is kept in pot full of turmeric water till they regain natural freshness and cheerfulness. Then jalauka can be applied on affected part.
- Affected area will be cleaned with luke warm water.
- Jalauka is held with small piece of cotton or gauze by covering its body; it will catch the skin and stick at the place.
- If he leech is not getting attached by doing so, take prick on the skin by needle no 20/21.
- After leech application, their body is covered with wet cotton gauze and cool water is dropped on the covering part continuously to provide cooling effect.

*M. A. M's*  
**Principal**  
M. A. M's, Sumatibhai Shah  
Ayurved Mahavidyalaya,  
Hadapsar, Pune- 411 028.

- Leech will suck blood. When it will get full up to its capacity it leaves the site. If the leech will not detach from site even after proper signs and symptoms of 'Raktamokshana' or sticking to the affected area due to fondness of smell of blood, they will be removed by sprinkling turmeric powder on their mouth.
- After detaching leech, vomiting will be induced to it. For vomiting induction turmeric powder will be sprinkled on mouth. The procedure will be continued until the appearance of vomitus appears.
- **References-** Su.su.13, Ash. Hru.su.25

### **Complication and management**

After detaching leech, affected part will be cleaned with cotton. Dressing will be done with turmeric and cotton pads. Tight pressure bandage is applied to stop bleeding.
