Preservation of rare medicinal plants in Dravyaguna Department.

Plants which are mentioned as rare or endangered or on the verge of extinction are preserved in the Dravyaguna Department. Plants which are not found in Pune or Maharashtra but are found elsewhere but are very rare are collected through field visits and preserved in the department.

Formalin must be diluted with water before it is used as a preservative. Strength of 5 % formalin is best for most purposes. The advantages of formalin over other preservatives are: it is inexpensive, it is generally available, a small bulk of concentrated stock solution may be diluted as needed, and specimens almost never decay in it.

5% of formalin is used in 1 liter of water to preserve the specimen.

Rare & endangered medicinal plants preserved in the Dravyaguna Dept. are as follows:

Ayurvedic name	Botanical name	Status – rare / endangered
Supari	Areca catechu	Rare in Pune area
Shweta Vacha	Acorus calamus Linn.	Belongs to Himalaya, Rare in Pune area
