## Cultivation of medicinal plants:

Medicinal plants are a source of biomolecules with therapeutic potential and as a lead to develop new drugs. Herbal medicines are considered as safer, better physiological compatibility and cost-effective. Cultivation of medicinal plant decreases the amount to which wild populations are harvested, it will also help to preserve plant species from extinction and will promote socio-economic growth. For cultivation purpose, the soil is prepared with the mixture of organic compost and vermicompost. We prepare more 100 saplings every year with the intention of cultivation and conservation. We also felicitate our guests with these green pots instead of bouquet.

**Medicinal plants which are cultivated in our Herbal garden (Dept. of Dravyaguna) are;**

Nirgundi	Vitex negundo
Vasa	Adhatoda vasica
Guduchi	Tinospora cordifolia
Asthishrunkhala	Cissus qudrangularis
Ashwagandha	Withania somnifera
Guggul	Commiphora wrightii
Snuhi	Euphorbia neriifolia Linn.
Pippali	Piper longum
Kustha Kulinjan	Alpinia galangal
Kumari	Aloe vera
